Background

ICOMIA
TECHNICAL FILE GENERATOR

For CE marking, manufacturers must compile 3 documents:

1. Owners Manual
   - ISO standard specifically for manuals
   - Most other standards list what must be included
2. Declaration of Conformity
   - Directive is explicit about what should be included
   - Industry has enthusiastically taken-up ICOMIA's templates
3. Technical File
   - There is no standard and no guide
   - Different Notified Bodies accept very different levels of evidence
     - Some only ask for drawings!
   - Yet this is the only document that can prove compliance
     - quality of file is inversely proportional to product liability

Technical File

ICOMIA

TECHNICAL FILE GENERATOR

- Description of the boat
- Outline of how it complies
  - In practice, a check against the applicable standards
  - But there are dozens of standards
  - Large parts of standards are inapplicable to any one boat
  - Is it economically viable to verify every clause of every standard?
  - Yes with the ICOMIA Technical File Generator!

Summary

ICOMIA Technical File Generator

- Generates formal Technical Files
- Completes Declarations of Conformity
- Concise
- Every clause of every applicable standard
- No tick lists
- Best possible protection for liability
